Keep track of changes to basic fields, so CRM can be updated

I would like to know which basic fields (email, gender, first and last name) have been changed so that I can retrieve this information and have it updated in a CRM by, for example, an account manager.

Ik zou graag willen weten welke basisvelden (email, gender, voor- en achternaam) zijn veranderd, zodat ik dit kan ophalen en in een CRM kan bij laten werken door bijv. een account manager.
