Campaigns: HTTP Request - Add visual indicator for settings completion when copying (important for token handling) [Open Discussion](#)

• Timon Stijns

- **Forum name:** #Verbetervoorstellen

When copying an HTTP-request object with a token in the Campaigns module, users may overlook the need to adjust or complete certain settings before the request is fully functional. Introduce a visual indicator (e.g., a warning icon, highlighted fields, or a notification message) that prompts users to review and fill in any required settings after copying an HTTP-request

object.
