What is your feedback on the Store in the new theme?

Feedback received so far:

In the store, you can filter by certain components. Webhooks fall under integrations, but when you filter only by integrations, no webhooks are visible. Is it possible to filter only by webhooks?

Resolved:

In the old theme, an installed app (in this example Mobile Messages) shows the message 'App is correctly installed' when clicking on it. In the new theme, it seems like you have to go through the installation steps again when you click on it, and you cannot get to the Logs menu anymore like in the old theme.

--> **resolution:** *hover over the app tile to see the three dots appear. This will give you the option to go to the logs or delete the app.*
