Recycle Bin / Trash for deleted assets (Emails, Campaigns, Profiles, Pages, Webhooks) Open Discussion

- Boaz Doornbos
- **Forum name:** #Verbetervoorstellen

Currently, when assets are deleted in Deployteq (such as emails, campaigns, profiles, pages, and potentially webhooks), they are permanently removed and cannot be restored. This can lead to accidental loss of important content and creates risk during clean-up work or when multiple users have access.

Feature request
Introduce a Recycle Bin / Trash functionality for deleted assets.

Proposed behavior
When a user deletes an asset (email, campaign, profile, page, and optionally webhooks), the item is moved to a Trash/Recycle Bin instead of being permanently deleted immediately.
Items remain in the Trash for 30 days (configurable).
After 30 days, items are automatically permanently deleted.
Optionally, the system sends a notification (e.g., to admins) before permanent deletion, so the content can still be reviewed or restored if needed.

Benefits
Prevents accidental deletion and loss of content
Gives admins time to verify deletions
Enables easy recovery without requiring support intervention
Improves overall content management safety and trust

Dit is echt een fantastisch idee! Misschien met versiebeheer bij de assets nog krachtiger!
