What can be found where in the new interface?

Deployteq - Suzanne Martens - 2025-04-18 - [Comments \(0\)](#) - [General](#)

In the new Deployteq interface (available from September 2024), some elements have been relocated compared to the previous version. Significant changes have been made, especially within the Reporting section. [This guide explains](#) how to use the new reporting features.

A general overview of the new interface can be found [in this FAQ](#).

This article provides an overview of various features from the old interface and where to find them in the new interface.

Reporting Home Screen

Differences

- In the old interface, you would open a category and scroll through the reports to find the one you need.
- In the new interface, all reports are listed with the most recent mailings at the top, and you can use filters to select a specific type of mailing.

Tabs within a Report

Differences

- The old interface includes the tabs: Dashboard, General, Opens/Clicks, Deliverability, Social Media, Live Images, Conversion, and Visual Clicks.
- The new interface includes the tabs: General, Opens/Clicks, Deliverability, and Visual Clicks.
 - The data previously found under the Dashboard tab is now included in the General tab of the new interface.
- Social Media and Live Images were **outdated features** and have been **removed** in the new interface.
- The Conversion tab still needs to be **re-added** to the new interface.

Splitrun

Differences

- Old interface: When you search for an email sent as a split run, you get two separate results. Clicking on one opens both in comparison mode. On the General tab, it's clear that the quickmail was sent as a split run, as both versions are shown side by side.

- New interface: On the reports homepage, the type indicates it's a split run. When you open the report, it automatically appears in Compare mode.
 - The Visual Clicks tab will be added later for the Compare mode.

Comparing Reports

Differences

- Old interface: First, you select one report, then click the 'Compare mailings' button, and then select additional mailings to add to the comparison.
- New interface: You tick the checkboxes for the reports you want to compare. As soon as more than one box is ticked, you can click the 'Compare' button.
 - The Visual Clicks tab will be added later for the Compare mode.

Campaign monitor

Differences

- In the old interface, you could select a campaign via the Reporting menu and view an overview of the 15 most recent campaign objects, including their status and number of customers in each object.
- In the new interface, this feature has moved to the campaign itself and can be accessed using the 'Inspector' button in the top menu. More information can be found [in this guide](#).

Missing something?

Some features have not yet been added to the new interface, such as the Export to PDF/Excel function in Reports or information on which profile a Quickmail was sent to.

Feedback regarding missing features or other points related to the new interface is being collected [in this forum](#).
