[SOLVED] Performance issue datamodel

2026-07-21 - Wouter Kroon - [Comments \(0\)](#) - [Solved](#)

Performance issue datamodel

Sinds 02:00 20 Juli zijn er performance problemen voor taken die gebruik maken van het datamodel:

- datamodel profielen
- datamodel imports
- campagne objecten die gebruik maken van het datamodel.

Deze taken kunnen nu niet of vertraagd verwerkt worden.

Op dit moment werken we er hard aan de performance te herstellen, zodra de performance is hersteld zullen we dit bericht updaten.

UPDATE: Vanaf 10:30 is de werking grotendeels hersteld, datamodel profielen kunnen hier nog steeds last van hebben.

UPDATE: Vanaf 23:49 is de werking volledig hersteld.

Performance Issue - Data Model

Since 02:00 this morning, we have been experiencing performance issues affecting tasks that rely on the data model, including:

- Data model profiles
- Data model imports
- Campaign objects that use the data model

As a result, these tasks may not be processed or may experience delays.

Our team is actively working to restore performance. We will update this message as soon as the issue has been resolved.

UPDATE: Service has largely been restored as of 10.30; data model profiles may still be affected.

UPDATE: Service has been fully restored as of 23.49.
