Keyboard shortcuts Open Discussion

I have been working with Deployteq for a numbers of years now. Something I do find myself keep coming back to is trying to use Keyboard keys or shortcuts, but without any luck. What I would like to see is the addition of (more) Keyboard supported keys and shortcuts in various situations, e.g. :
- Pressing enter to save any configuration popup in e.g. a campaign.
- Using arrow keys in a campaign to cicle through all of the objects present, then pressing enter to open (and close) them.
- the ctr + c/v for copy and pasting in .e.g. both the file explorer and campaigns
- Etc etc

I hope this will gain some traction. Would love to see something being implemented in the future :).
