Make a split-view in Analytics for A/B tests Open Discussion

Make it possible to view an A/B test within one dashboard. We are currently building dashboards with 2 profiles in the background to make this possible (so they change the profiles & then the widgets show the new data), This is a lot of work. Every widget needs to be connected to either the A or B profile.

It would be great if we could build one dashboard and click on: split view. Then the same dashboard shows twice: both with their own dashboard filters. This should be saveable as well. Another option would be a default A/B test dashboard.

Aanvullend: we versturen regelmatig splitruns en smartruns. Zou fijn zijn om de resultaten naast elkaar te kunnen zien van zo'n verzending. Nu moet ik terug naar de oude rapportage.
