New Layout: Link to 'Filemanager' on highest level [Open Discussion](#)

- PI Paula Isphording
- **Forum naam:** #Verbetervoorstellen

The new layout causes me to click a lot more. If I want to browse through my content I always first need to open a dropdown (for example 'Content to go to Emails' or 'Databeheer' to find the 'Filemanager').

To make browsing quicker, it would be great if you could immediately open the filemanager on the highest level. Just like you can immediately open the store.
