Overview of which groups/profiles/pages/emails/webhooks are used in which campaigns Open Discussion

My colleagues, clients, and I would find it very useful if we could generate a report of which groups/profiles/pages/emails/webhooks are used in which campaigns. Sometimes it can be a maze of groups/profiles/pages/emails/webhooks. If you want to find out whether something is being used, you currently have to click through all the campaigns first.

Mijn collega's, klanten en ik zouden het heel handig vinden als we een uitdraai kunnen maken van welke groepen/profielen/pages/mails/webhooks er in welke campagnes worden gebruikt. Het is soms een wirwar aan groepen/profielen/pages/mails/webhooks. Als je wil achterhalen of iets gebruikt wordt, zal je eerst alle campagnes moeten aanklikken.

This would be very helpful. And not only in campaigns but also in profiles (when you use Profile in Profile). Sometimes there are so many profiles, it's hard to see which profile is used in which profile.

This would be very helpful. This would also be very helpful if there is a way to see which profiles are used in other profiles.
